

Waterproofing Headlights

Our HID Controller and DRL Controller are waterproof, as are the headlight lenses. Our headlights are water resistant. We have not waterproofed our headlights at the rear, because for most installs it isn't necessary under normal driving conditions.

Although for any customers who drive off-road and may partially submerge their front ends for brief periods, it's recommended to waterproof our headlights.

To waterproof our headlights, after the HID bulbs are inserted and the blue rubber grommet is inserted into the black rubber rear cover and black rubber rear cover is pushed onto the rear of the headlight housing, it's recommended to use a silicone sealant to seal the black rubber rear cover and the blue rubber grommet to waterproof our headlights. See below:

Happy Motoring,

The HID Upgrades Team!
